# Connecting and Operating Optional Equipment

## Connecting Optional Equipment

You can connect optional audio-video equipment to the TV such as a VTR, video disc player, and stereo system.

**To connect a VTR**  
using the T terminal  
Connect the serial  
output of the VTR to the  
serial terminal T of the  
TV.  
We recommend that you  
line in the video signal  
to programme number  
1. For details see  
"Preset channels"  
manually on page 10.  
If the picture or the  
sound is distorted  
move the VTR away  
from the TV.

**S-video Input(Y/C  
Input)**  
Video signals may be  
separated into Y  
(luminance or  
brightness) and C  
(chrominance) signals.  
Separating the Y and C  
signals prevents them  
from interfering with one  
another, and therefore  
improves picture quality  
(especially luminance).  
This TV is equipped with  
3 S Video input jacks  
through which these  
separated signals can be  
input directly.

**When connecting a  
stereaural VTR**  
Connect only the white  
-C jack to both the TV  
and VTR.

**Selecting input with  
PROGR +/- or number  
buttons**  
You can preset video  
input sources to the  
programme positions so  
that you can select them  
with PROGR +/- or  
number buttons. For  
details, see "Preset  
channels manually" on  
page 10.

## Selecting input and output

This section explains how to view the video input picture (of the video source connected to your TV), and how to select the output signal using direct access buttons or the menu system.

### Selecting input

Press **↵** repeatedly to select the input source.

The block diagram illustrates the Philips RDS receiver system architecture. It features a series of interconnected functional blocks: PLL, FILTER, MULTI PLEXER, INTEGRATOR, MATRIX, CROSS ADJ, 54KHz FILTER, SWITCH, REFERENCE VOLTAGE, I<sup>2</sup>CBUS, VOLUME HEADPHONES, TREBLE, VOLUME MAIN CONTROL, CLIPPING DETECTOR, BASE WIDTH, QUASI STEREO, and BASS. The system is powered by pins 15 through 28, while pins 1 through 14 are used for data and control signals. The signal path starts from the input pins, passes through the PLL and FILTER, then through the MULTI PLEXER and INTEGRATOR, followed by the MATRIX and CROSS ADJ blocks. The signal then goes through the 54KHz FILTER and the SWITCH, which is controlled by the REFERENCE VOLTAGE. The output of the SWITCH is connected to the I<sup>2</sup>CBUS, which then branches out to the VOLUME HEADPHONES, TREBLE, and VOLUME MAIN CONTROL. The VOLUME MAIN CONTROL also feeds into the CLIPPING DETECTOR, BASE WIDTH, QUASI STEREO, and BASS blocks. The CLIPPING DETECTOR and BASE WIDTH blocks are connected to the QUASI STEREO and BASS blocks. The QUASI STEREO and BASS blocks are connected to the output pins 11 and 12.

The diagram shows a 2-to-1 multiplexer. It has four inputs: 3, 4, 5, and 6. Input 3 is connected to a block labeled 'MUTE/ST-BY'. Input 4 is connected to the same block. Input 5 is connected to a switch. Input 6 is connected to the other side of the switch. The output of the switch is connected to the '+' input of an inverter. The output of the inverter is connected to output 2. Output 1 is connected to input 3.

The block diagram illustrates the architecture of a video receiver. It begins with an 'ANTENNA' input connected to a 'SWITCH' block. This switch routes the signal to either a 'BANDPASS' filter or a 'SECAM' input. The 'BANDPASS' filter's output goes to an 'AFC' (Automatic Frequency Control) block, which then feeds into a 'CLOCK' block. The 'CLOCK' block provides timing signals to the 'FOCTL' (Frequency Offset Control) block and the 'SECAM DEMOD' block. The 'SECAM DEMOD' block's output goes to the 'PAL/NTSC DEMOD' block. The 'PAL/NTSC DEMOD' block's output goes to the 'TV' output. The 'SECAM DEMOD' block also has a feedback path to the 'AFC' block. The 'CLOCK' block also feeds into the 'FOCTL' block, which then feeds into the 'PLL' (Phase-Locked Loop) block. The 'PLL' block's output goes to the 'HUE' block, which then feeds into the 'PAL/NTSC DEMOD' block. The 'HUE' block also has a feedback path to the 'PLL' block. The 'PLL' block's output goes to the 'DOUBLER' block, which then feeds into the 'BIAS' block. The 'BIAS' block's output goes to the 'TV' output. The 'DOUBLER' block also has a feedback path to the 'PLL' block. The 'BIAS' block also has a feedback path to the 'DOUBLER' block. The 'TV' output is connected to a 'TV' block, which is also connected to a 'BIAS' block. The 'BIAS' block's output goes to the 'TV' output. The 'TV' output is also connected to a 'BIAS' block. The 'BIAS' block's output goes to the 'TV' output. The 'TV' output is also connected to a 'BIAS' block. The 'BIAS' block's output goes to the 'TV' output.
